For the deer that invade the plantations, pitfalls (a:'ma|ⁿ) are dug to the depth of a meter and a half, a sharpened paxiuba stake being set vertically at the bottom. In a pitfall that I saw, a dog had died, and a few days later an alligator also fell into it. 224

### Gathering

The gathering of wild fruits and the capture of animals that cannot properly be included under hunting are still carried on by both sexes; by men when the opportunity presents itself and by women on trips made for the purpose. 222 [462]

There are many varieties of edible wild fruits, although most have no economic importance, being no more than mere tidbits, like the pods of the *arara tucupy*, the seeds of which are covered with a thin layer of thick, sweet liquid. The only fruits of real economic importance are those of the four palms, burity (*Mauritia vinifera*), *bacabeira* (*Oenocarpus bacaba*), *patauá* (*Oenocarpus patauá*), and açahy (*Euterpe* sp.). All four species are common in the jungles of the Tukuna. During the period of gathering one always sees large earthenware vessels containing burity fruits soaked in a solution to make the rinds come off more easily, and the Indians constantly help themselves. The fruits of these four palms are then macerated in tepid water and a fatty drink is prepared by a process common among the Neobrazilians as well, the separation of the pulp from the stones by treading. The liquid is passed through a very fine sieve (va'iri-činĵ-[ⁿn, from va'ira, açahy). A sufficient quantity is then prepared so that the neighbors may be invited to drink also. The gathering of the fruits and the preparation of the beverage are feminine tasks. 222 824 262 [415] 272 [171] [462]

The Tukuna are acquainted with the Brazil nut, or niggertoe, *castanha do Pará* (*Bertholletia excelsa*), but they eat only the kernels without preparing from them either milk or oil. Nino, an Indian of Igarapé da Rita, had planted near his house about ten such saplings, which were then bearing fruit. 262 [245]

The Tukuna will not eat toads, though they do not reject various species of frogs; they also eat beetle larvae, which are found in burity palms, and the queens of *saúva* ants (l.g., *içá; Atta cephalotes*) when they are swarming. Of the various kinds of honey the most appreciated is that of the wild bee, jandaíra. Bees are not raised at home. [263]

### Food

The most common food is fish, either boiled or freshly smoked and eaten with farinha (formerly with beijús). Seasoning is obtained by thrusting the fingertip into a small dish with crushed salt and pepper and then licking it. At present, the salt is bought from the Neobrazilians, but it is said that in the old days it was prepared from the ash from burned green marajá palm leaves. 262 [263] [459]

Of fish, the Indian takes only as much as he can swallow at one gulp, picking it, with a rapid pinch of the fingers, from the common receptacle. In consequence, the piece of fish shortly assumes such a tattered appearance that it looks like nothing more than a dog's dinner. 264

When there is roast game, no one cuts himself a large piece, but each in turn seizes the meat, tears off a chunk with the teeth, and tosses the remainder back
